

Business Analyst Boot Camp

Code:	BA-BC
Length:	4 days
URL:	View Online

Develop critical business analyst skills in this industry-recognized business analyst training course.

Business Analysts help create and communicate the knowledge required to decide precisely what to build. They provide this essential service by assessing and analyzing the business environment, defining the scope of business problems, capturing project requirements, designing high-value solution approaches, and ensuring that the defined scope meets the customer's needs, goals, objectives, and expectations.

This 4-day Business Analyst training course will give you hands-on experience with the latest proven techniques for identifying a project's scope, developing and discovering requirements, user stories, and use cases, and documenting them expertly. You will gain pragmatic solutions to sustain stakeholder engagement throughout the project lifecycle, including questioning, listening, business need identification, problem-solving, presentation, validation, and acceptance of the effective solution. Lively lectures combined with insightful demonstrations and realistic practice exercises will provide you with the competence and confidence to improve project outcomes through better requirements elicitation and requirements development. You'll gain a thorough understanding of the challenges faced in defining correct requirements, practical approaches for eliciting and documenting requirements, and strategies for managing requirements throughout the project life cycle.

- NOTE: Live Virtual Classroom course length is 5 days.
