

Developing Rule Solutions in IBM Operational Decision Manager V8.9

Code:	WB400G
Length:	5 days
URL:	View Online

An updated version of this course is available. For more information, click *Developing Rule Solutions in IBM Operational Decision Manager V8.9.2* (WB402G).

This course is also available as self-paced virtual (e-learning) course *Developing Rule Solutions in IBM Operational Decision Manager V8.9* (ZB400G). This option does not require any travel.

This course introduces developers to IBM Operational Decision Manager V8.9. It teaches you the concepts and skills that you need to design, develop, and integrate a business rule solution with Operational Decision Manager.

The course begins with an overview of Operational Decision Manager, which is composed of two main environments: Decision Server for technical users and Decision Center for business users. The course outlines the collaboration between development and business teams during project development.

Through instructor-led presentations and hands-on lab exercises, you learn about the core features of Decision Server, which is the primary working environment for developers. You design decision services and work with the object models that are required to author and execute rule artifacts. You gain experience with deployment and execution, and work extensively with Rule Execution Server. In addition, you become familiar with rule authoring so that you can support business users to set up and customize the rule authoring and validation environments. You also learn how to use Operational Decision Manager features to support decision governance.

The lab environment for this course uses Windows Server 2012 R2 Standard Edition.

Skills Gained

- Describe the benefits of implementing a decision management solution with Operational Decision Manager
- Identify the key user roles that are involved in designing and developing a decision management solution, and the tasks that are associated with each role
- Describe the development process of building a business rule application and the collaboration between business and development teams

- Set up and customize the Business Object Model (BOM) and vocabulary for rule authoring
- Implement the Execution Object Model (XOM) that enables rule execution
- Orchestrate rule execution through ruleflows
- Author rule artifacts to implement business policies
- Debug business rule applications to ensure that the implemented business logic is error-free
- Set up and customize testing and simulation for business users
- Package and deploy decision services to test and production environments
- Integrate decision services for managed execution within an enterprise environment
- Monitor and audit execution of decision services
- Work with Operational Decision Manager features that support decision governance

Who Can Benefit

This course is designed for application developers.

Prerequisites

- Experience with the Java programming language and object-oriented concepts
- Knowledge of Java Platform, Enterprise Edition (Java EE)
- Basic knowledge of Extensible Markup Language (XML)
- Basic knowledge of the REST API and RESTful architecture

Course Details

Course Outline

Course introduction
 Introducing IBM Operational Decision Manager
 Exercise: Operational Decision Manager in action
 Developing decision services
 Exercise: Setting up decision services
 Programming with business rules
 Developing object models
 Exercise: Working with the BOM
 Exercise: Refactoring
 Orchestrating ruleset execution
 Exercise: Working with ruleflows
 Authoring rules
 Exercise: Exploring action rules
 Exercise: Authoring action rules
 Exercise: Authoring decision tables
 Customizing rule vocabulary with categories and domains
 Exercise: Working with static domains
 Exercise: Working with dynamic domains
 Working with queries
 Exercise: Working with queries
 Debugging rules
 Exercise: Executing rules locally

Exercise: Debugging a ruleset
Enabling tests and simulations
Exercise: Enabling rule validation
Managing deployment
Exercise: Managing deployment
Exercise: Using Build Command to build RuleApps
Executing rules with Rule Execution Server
Exercise: Exploring the Rule Execution Server console
Auditing and monitoring ruleset execution
Exercise: Auditing ruleset execution through Decision Warehouse
Working with the REST API
Exercise: Executing rules as a hosted transparent decision service (HTDS)
Introducing decision governance
