Learn how to automate Linux system administration tasks with Ansible

Red Hat System Administration III: Linux Automation with exam (RH295) is designed for Linux® system administrators and developers who need to learn and validate how to automate provisioning, configuration, application deployment, and orchestration. You will prove your ability to install and configure Ansible® on a management workstation; prepare managed hosts for automation; write Ansible Playbooks to automate tasks; and run playbooks to ensure servers are correctly deployed and configured.

The Red Hat Certified Engineer (RHCE) exam for Red Hat Enterprise Linux 8 (EX294) and Red Hat Certified Certified System Administrator (RHCSA) exam (EX200) are included in this offering. This offering is based on Red Hat® Enterprise Linux 8 and Red Hat Ansible Engine 2.8.

## Skills Gained

- Install and configure Ansible or Red Hat Ansible Engine on a control node.
- Create and manage inventories of managed hosts, as well as prepare them for Ansible automation.
- Run individual ad hoc automation tasks from the command line.
- Write Ansible Playbooks to consistently automate multiple tasks and apply them to managed hosts.
- Parameterize playbooks using variables and facts, and protect sensitive data with Ansible Vault.
- Write and reuse existing Ansible roles to simplify playbook creation and reuse code.
- Automate common Red Hat Enterprise Linux system administration tasks using Ansible.

## Who Can Benefit

This course and exam are geared toward Linux system administrators, DevOps engineers, infrastructure automation engineers, and systems design engineers who are responsible for these tasks:

- Automating configuration management
- Ensuring consistent and repeatable application deployment
- Provisioning and deployment of development, testing, and production servers
- Integrating with DevOps continuous integration/continuous delivery workflows

# Course Details

## Introduce Ansible

- Describe Ansible concepts and install Red Hat Ansible Engine.

## Deploy Ansible

- Configure Ansible to manage hosts and run ad hoc Ansible commands.

## Implement playbooks

- Write a simple Ansible Playbook and run it to automate tasks on multiple managed hosts.

## Manage variables and facts

- Write playbooks that use variables to simplify management of the playbook and facts to reference information about managed hosts.

## Implement task control

- Manage task control, handlers, and task errors in Ansible Playbooks.

## Deploy files to managed hosts

- Deploy, manage, and adjust files on hosts managed by Ansible.

## Manage large projects

- Write playbooks that are optimized for larger, more complex projects.

## Simplify playbooks with roles

- Use Ansible roles to develop playbooks more quickly and to reuse Ansible code.

## Troubleshoot Ansible

- Troubleshoot playbooks and managed hosts.

## Automate Linux administration tasks

- Automate common Linux system administration tasks with Ansible.
