

IBM - Introduction to Rational Publishing Engine 6.0.x

Code:	U5RPE6IG
Length:	1 days
URL:	View Online

This course teaches how to design and develop document templates in Rational Publishing Engine. The course content is compatible with the old and new product naming. Participants learn how to generate documents from templates, including data from supported applications. Modular design, reusability and formatting strategy and important topics in the course.

Skills Gained

- Explain key concepts and terminology
- Explain the architecture and key components
- Create and format templates
- Generate document-style reports
- Use data schemas
- Define data sources
- Use dynamic binding for accessing data
- Create document specifications
- Use conditions for filtering data

Who Can Benefit

- Project support teams
- Those with a role in designing or developing reports
- System and Software Engineers
- Program or Project Managers

Prerequisites

- Knowledge about the application and data to be published
- An understanding of basic programming constructs

- Basic understanding about XML files and schema definitions

Course Details

Course Outline

- About this course
- Key concepts and terminology
- Product overview
- Architecture
- Creating templates
- Formatting
- Data schemas and data sources
- Dynamic binding
- Document specifications
- Using conditions
- Best practices
