IBM - CICS V5.3 CICSPlex System Manager Administration

This advanced-level course is designed to teach the skills that are needed to install, configure, and use CICS TS System Manager components and functions.

The course begins with an overview of the CICSPlex System Manager (CICSPlex SM) environment, and then covers the installation process for CICSPlex SM. It explains how to configure and start a CICSPlex Managing Address Space (CMAS) and the web user interface (WUI) server, and how to use the CICS Explorer CICS management client interface (CMCI) in addition to the WUI.

Throughout the course, you learn about the interfaces that the product supplies, such as the WUI, application programming interface (API), batch repository utility (BATCHREP), CICS Explorer, and service delivery platform cloud computing. You learn how to configure and control each of the functional components of CICSPlex SM, including topology (TOP), Workload Manager (WLM), real-time analysis (RTA), monitor (MON), and Business Application Services (BAS). The course explains how to define CICS Manager Address Spaces and describes the CICSPlex SM security environment, including the external security manager RACF definitions. You also learn how to use CICSPlex SM resources to configure and deploy a CICS platform application to a cloud infrastructure.

You gain experience with your newly acquired CICS administration skills in hands-on exercises throughout the course. You implement and populate a CICSp Plex, and create and customize the WUI server and CICSp lex. You perform various tasks by using the WUI, batch utilities, and CICS Explorer, such as creating and managing a CICSPlex, defining and managing monitor and RTA definitions, and defining and installing CICS resources. You also use WLM to implement workload management, and use the CICS Explorer to create, deploy, and manage platforms and applications to the cloud.

For information about other related courses, see the IBM Training website:

Skills Gained

- Describe CICSPlex System Manager and its functions and components
- Install CICSPlex System Manager
- Describe and use the web user interface (WUI) that is provided by CICSPlex System Manager
- Configure and define CICSp lexes and associated CMAS environments by using the WUI
- Define and use the CICS Explorer to configure the CMCI to connect to a CICSp lex
Who Can Benefit

This course is designed for CICS system programmers, system designers, and operations staff members who are responsible for planning, installing, operating, or managing a CICSpex by using CICSpex SM.

Prerequisites

- Be familiar with CICS architecture and facilities, either through experience or by successfully completing CICS V5.3 Fundamentals (WM806) and CICS V5.3 Systems Tailoring and Administration (WM816)
- Have a working knowledge of CICS TS Intercommunication facilities

Course Details

Course Outline

Course introduction
CICSpex System Manager introduction
Exercise: Getting started with CICSpex SM
CICSpex System Manager installation
Exercise: CICSpex SM installation procedure
CICSpex SM configuration, WUI implementation, and CICSpex Explorer
Exercise: CICSpex SM configuration, WUI implementation, and CICSpex Explorer
CICSpex System Manager topology and operations services
Exercise: CICSpex SM topology and operations
CICSpex SM WUI customization
Exercise: CICSpex SM WUI customization
CICSpex System Manager Workload Manager
Exercise: CICSpex SM WLM definitions
CICSpex System Manager RTA and monitoring
Exercise: CICSpex SM RTA and monitoring definitions
CICSpex SM Business Application Services (BAS)
Exercise: CICSpex SM BAS definitions
CICSpex SM and cloud enablement
Exercise: CICSpex SM cloud enablement
CICSpex SM miscellaneous topics
Course summary

- Define CICS systems to CICSpex System Manager by using the WUI and CMCI
- Manage the operations of a CICSpex of CICS systems by using the WUI and CMCI
- Create definition records that CICSpex System Manager applications can use as directives, such as Workload Manager, real-time analysis, and Monitor Services
- Use CICSpex System Manager (CPSM) commands to view and dynamically manage the data that CICSpex System Manager applications use
- Use the BAS to create and manage CICS resources through application scopes
- Use the WUI editor facilities to define WUI views, menus, users, and user groups, and to edit favorites
- Describe the CPSM API and use BATCHREP
- Describe and use the CICSpex Explorer to deploy a CICS platform and application to the cloud
